Project Work

Design Declare Clone:

- Developed a clone of a dynamic design-focused website (Design Declares) to showcase modern responsive design and advanced state management.
- Implemented using React.js, Redux Toolkit, and TanStack Query for predictable state flow and efficient server state caching.
- Focused on pixel-perfect design and high-performance across various devices.

Tutor Hustle:

- Developed a platform that connects students with tutors, enabling assignments submission and tutor compensation.
- Utilized Angular, Tailwind, and Angular Material for a responsive and intuitive front-end. .

- Implemented Node.js with Express.js for a robust back-end architecture.
- Enabled user authentication and role-based access control for secure and efficient platform operations.
